I've reviewed the latest sensory assessment results, and there's significant improvement in Liam's auditory processing scores. The intervention strategies seem to be working well. However, I'm noticing some challenges with tactile sensitivity that we should address in our next session.

That's great to hear about the auditory processing! At home, I've noticed he's less overwhelmed by sudden noises. Regarding tactile sensitivity, he's been avoiding certain textures in clothing. Do you have specific strategies we could try?

Building on Amira's observation, for tactile sensitivity, we could try a 'sensory box' with various textures (soft, rough, smooth) for exploration, and slowly introduce different clothing materials. I'll send some resources.

That sounds like a great idea, Dr. Lewis! I'll start assembling a sensory box this weekend. Thank you!
